

Security / Plant & Process Safety

## Legislation and regulatory affairs

### Our services

The operators of chemical plants and their equipment must comply with a number of statutory and regulatory requirements. These include national and European laws, regulations and directives concerning equipment and product safety, chemicals, hazardous substances, explosion protection, occupational safety and major accident prevention. We are your competent partner in ensuring pragmatic compliance with these requirements. In addition, we offer comprehensive services in respect of transport safety, e.g. in the classification of substances in accordance with transportation law.

### Your advantages

- Our reports on the safety of your plants are an integral part of the documentation required by the regulatory authorities and serve as verification of adequate and legally compliant safety concepts in the licensing process, in dealing with the regulatory authorities or in inspections.
- You receive professional and cost-effective support in the practical implementation of legislative requirements.
- Incident-free operation of your plant helps to prevent conflicts with the regulatory authorities.

### Our strengths

Many of our own experts are members in national and international regulatory committees. This ensures we are always aware of the latest developments.

As a partner that is recognized by the regulatory authorities, we can offer you individually customized, legally compliant solutions based on our many years of experience and specific knowledge.
